

San Juan Builds The Strongest Pools In The World!

All Glass is Hand Laid

32-mil Gel Coat
the thickest in the Industry
(two 16-mil layers)

1.5 oz Strand Mat
(three layers)

24 oz Woven Roving
(two layers)

San Juan Fiberglass Pools The key to Quality and Strength

Fiberglass Pools are not all the same. The big difference in fiberglass pools is how the pool is constructed. Each San Juan Fiberglass Pool is made with a minimum of 5 hand laid layers of fiberglass.

What does this actually mean for the fiberglass pool?

A stronger fiberglass pool that uses hand laid fiberglass, creates a consistent level of thickness throughout the fiberglass pool shell. This process is more labor intense making it more expensive to produce, but the quality benefit outweighs the cost. Other companies that produce fiberglass pools construct their pools with fiberglass that is shot out of a chop gun. The fiberglass becomes small pieces that are glued together. This produces a much weaker finished pool than the hand laid pool. **A continuous piece is much stronger than one made up of many small pieces.** Also, when spraying fiberglass from a chop gun, you will never get a consistent thickness and your pool shell will be compromised.

The construction of a fiberglass pool is almost the same as a fiberglass boat and this is the reason why a 24ft boat from one company is \$35,000 and from another company is \$65,000. Its due to how the boat is constructed and with what kind of materials were used.
